

## SUMMARY

Unity developer with 11 years building real-time multiplayer and gameplay systems in C# across mobile, PC, console, WebGL, and VR. Shipped an Apple Arcade title, a puzzle platformer certified on six platforms, four live-service iGaming titles, and an enterprise metaverse platform for Saudi Arabia's GOSI.

Works deep in server-authoritative netcode — Photon Fusion and PUN2, Netcode for GameObjects, Mirror — across matchmaking, session management, state synchronization, and deterministic simulation between client and server. Equally at home on gameplay feel: character controllers, physics, animation, and the iteration loop that makes movement read well.

Has led teams and owned delivery on several projects while staying hands-on in the codebase.

## CORE EXPERTISE

### Multiplayer & Netcode

- Server-authoritative architecture
- Photon Fusion 2 & PUN2
- Netcode for GameObjects, Mirror
- Matchmaking & session management
- State synchronization & interpolation
- Deterministic simulation
- Dedicated servers & load testing

### Gameplay & Engine

- Gameplay systems programming
- Character controllers & physics
- Unit AI & pathfinding
- Unity performance profiling & optimization
- WebGL / IL2CPP build pipeline
- Clean architecture & system design
- Cross-platform delivery & certification

## EXPERIENCE

### AptechMedia — Technical Manager & Project Lead

Apr 2026 – Present

*Shards of Destiny (working title) — real-time strategy / base-building, PC*

- Designed and built the core technical architecture — base-building and grid placement systems, unit AI and pathfinding, resource economy, combat resolution, and progression.
- Specified the server-authoritative backend for player state, base persistence, offline progression, and anti-cheat validation.
- Built live-service foundations from the outset: telemetry, remote configuration, seasonal content cadence, and economy tuning infrastructure.
- Set up engineering standards, code review process, branching strategy, and the CI/CD build pipeline for repeatable, testable builds.
- Own delivery for a team of 7 across engineering, art, and design — roadmap, sprint execution, and release planning.

**Technologies:** Unity, C#, PC, RTS systems, pathfinding & unit AI, server-authoritative backend, live-service architecture, CI/CD

### Section Soft — Technical Lead

Dec 2025 – Aug 2026

*GOSIVerse 2.0 — enterprise metaverse platform for the Government of Saudi Arabia*

- Technical lead on a platform shipped to thousands of registered members of GOSI (General Organization for Social Insurance, Saudi Arabia) across Android, iOS, and VR.
- Built secure member authentication and onboarding against GOSI's existing member systems, so users enter the platform with verified identity and record.

- Implemented the avatar creation pipeline and the guided profiling flow that generates a personalized member profile from questionnaire input and GOSI-held data.
- Architected the platform's centerpiece feature: a conversational "future self" experience letting members speak with a 50–60-year-old projection of themselves about long-term financial outcomes.
- Built the data pipeline linking member profile data to personalized guidance surfaced in conversation.
- Set architecture direction and reviewed implementation quality across a team of 11.

**Technologies:** Unity, C#, Android, iOS, VR, avatar systems, conversational AI, REST APIs, enterprise system integration, cloud infrastructure

## MaxDuel (Betsoft Gaming) — Senior Unity Developer

Dec 2024 – Nov 2025

*Max Slam, 21 Duel, 21 Rush, Multiplinko — real-time multiplayer iGaming*

- Built real-time multiplayer gameplay systems in Unity and C# across four live-service iGaming titles, supporting matches of up to 60 concurrent players, serving primarily the US market.
- Architected server-authoritative multiplayer, matchmaking, and session management with Netcode for GameObjects.
- Built deterministic ball physics for **Multiplinko**, a WebGL multiplayer Plinko title — keeping client and server simulations in agreement and reducing the synced payload to initial directions plus multiplier and bucket IDs.
- Drove performance optimization across mobile and WebGL to meet release quality targets.
- Conducted code reviews and mentored developers; contributed to long-term technical planning and architecture roadmapping.

**Technologies:** Unity, C#, multiplayer architecture, WebGL, deterministic simulation, Netcode for GameObjects, Unity Services, JavaScript, REST APIs

## Big Immersive — Senior Unity Developer

Aug 2023 – Jul 2024

### Virtua & Maians

- Designed the foundational architecture for multiplayer metaverse systems.
- Implemented state synchronization using Photon Fusion 2 and integrated backend APIs for real-time functionality and communication.
- Optimized WebGL builds against browser performance targets.

### Nitro League

- Implemented and shipped gameplay features across backend, QA, marketing, and design dependencies.
- Managed sprint execution and the technical backlog in Jira; improved workflows and project maintainability, reducing rework.

## WRP Studios (erstwhile weRplay) — Senior Unity Developer / Team Lead

Apr 2021 – Jul 2023

- Principal developer on **Explottens**, an Apple Arcade title — built the gameplay systems and the entire player-feel layer (recoil, drag on direction change, water physics, weapon variety) through repeated iteration and playtesting, with no predefined design document to work from.
- Senior Unity developer on **Lost Twins 2**, a puzzle platformer certified and shipped on Steam, PS5, Xbox Series X|S, Nintendo Switch, iOS, and Android; reported directly to the CTO.
- Built production-ready gameplay systems for **Spy Ninja Network**.
- Team lead across multiple concurrent Unity projects — allocating work, owning technical quality, and enforcing clean architecture, coding standards, and review workflows.

## AptechMedia — Co-Founder & Technical Lead

Mar 2016 – Mar 2021

- Designed and implemented the multiplayer architecture for **Poker King**, a turn-based multiplayer poker game built on Photon networking.
- Lead developer on **Deer Hunt**, an FPS hunting game for mobile platforms.
- Built gameplay systems, UI systems, and platform-specific optimizations across Android and iOS titles.
- Managed debugging, testing, store submission, and release support throughout development lifecycles.
- Co-founded the studio and grew it from 7 to 60+, owning technical direction across multiple concurrent Unity projects from concept through release and post-launch support.

## Skippy Apps — Unity Developer

Mar 2015 – Feb 2016

- Developed gameplay features, UI systems, and mobile platform features in Unity and C#; contributed to debugging, testing, and optimization workflows.

## EDUCATION

Bachelors of Science in Electrical Engineering

FAST National University of Computer  
and Emerging Sciences  
(Islamabad, Pakistan)

2013

## TECHNICAL SKILLS

**Engine & Languages:** Unity 3D, C#, C++, TypeScript, JavaScript, Python, Dart

**Multiplayer:** Photon Fusion 2 & PUN2, Netcode for GameObjects, Mirror, server-authoritative architecture, matchmaking systems, dedicated servers, state synchronization, deterministic simulation, load testing

**Gameplay & Platforms:** Gameplay systems, character controllers & physics, unit AI & pathfinding, performance profiling, WebGL & IL2CPP, mobile, PC & console, VR, metaverse & avatar systems, platform certification

**Backend & Tooling:** Node.js, REST APIs, WebSockets, Firebase, PlayFab, AWS (EC2, S3, CloudFront), DigitalOcean, CI/CD pipelines, GitHub Actions, Unity Cloud Build, Jira
